

# What is MSUD explore5™?

**When your child is around 6 months of age, your dietitian will help you introduce solids into their diet.**

**MSUD explore5 is a powdered, BCAA-free\*, protein substitute suitable for infants and young children with Maple Syrup Urine Disease (MSUD). It provides the 'safe' protein without BCAA's#. When mixed with water it is easily made into a low volume spoonable consistency.**

#BCAA refers to the Branch Chain Amino Acids - Leucine, Isoleucine and Valine.

**MSUD explore5** will be used alongside breast milk/standard infant formula and your child's BCAA-free\* formula in order to meet their increasing protein requirements.

At approximately 12 months of age, MSUD explore5 will completely replace the BCAA-free\* formula. The solid foods you are introducing at this time will provide all the natural protein they require. Your dietitian will let you know how many leucine exchanges your child needs each day.

- MSUD explore5 is suitable from 6 months to 5 years of age.
- It comes in 12.5g sachets which contain 5g protein equivalent.
- There are 30 sachets in a box.
- It is unflavoured.

**If you have any questions about MSUD explore5, you should always speak to your dietitian.**

\*No added leucine, isoleucine or valine. These may be present in trace amounts from other ingredients (<10mg/100g powder, <4mg/serving).

Refer to product labels for allergen and other product information.
